January Jan 14th Meeting at 1pm
    Moderated by Mike Svoboda
    followed by this month’s presentation
Smart Speakers & Digital Assistants
by Mike Long
Learn about Google Home and Alexa smart speakers that allow you to stream music, podcasts, audiobooks and perform commands at the sound of your voice.

SCORCC Board Members
    Cathy Amen - Jim Bartlett - Toby Charles
    Dan Diemert - Ted Kramper - Norman Miller
    Deanna Rickert - Ron Rohlfing - Dianne Roling
    Chris Sellmeyer - Mike Svoboda

Future General Meeting Dates:
    Feb 11th, Mar 3rd, Apr 14th,
    May 19th, June 9th

TREASURER’S REPORT
Balance November 4, 2019 .................. $2,447.24
Receipts .................................................... $830.50
Subtotal .............................................. $3,277.50
Disbursements .................................... ($56.50)
Balance December 2, 2019 .................. $3,221.24

Notify Treasurer Mike Svoboda of any changes to your mailing or e-mail address.

Visit the SCORCC Website at
http://www.scorcc.org
On the site you will find a club history, pictures of the officers, SIG chairs, committee chairs and information about the Special Interest Groups (SIGs), and a calendar of upcoming events. The member list page with contact information for all active SCORCC members is accessible only by password for your protection. After joining the club, new members will receive an e-mail from the SCORCC Webmaster with the password. For questions about the Web site e-mail Webmaster@scorcc.org.
Chrome Apps, Plugins, Extensions: What’s the Difference?

There’s a lot going on in Google Chrome. It’s the most feature-complete and well-supported web browser in existence and has expanded the definition of what a browser can do. This is in large part because of its support of apps, plugins and extensions made by third-party developers.

But what is the difference between these three things? If you’re looking to get an ad-blocker, is that an app or extension? And what if you need to watch an embedded video on a website, but it’s not working?

Here we explain the differences between Chrome apps, plugins and extensions, so you will always know what you’re looking for.

Chrome Apps

Probably the most ambiguous of the three things we’ll be covering in this guide, Chrome apps can mean more than one thing.

First, and most simply, Google itself refers to apps and extensions interchangeably. As proof, if you go to the Extensions page in the Chrome web store, in the address bar replace the word “extensions” with “apps;” it will actually redirect back to the extensions page!

This wasn’t always the case, as the Web Store used to have a dedicated “Apps” section with standalone desktop apps available there. But in late 2017 Google got rid of these traditional Chrome apps, as it pushed the idea of “Progressive Web Apps,” which essentially turn websites into instantly accessible apps from your desktop or phone home screen.

On Chrome OS, in the Web Store you’ll still find an “Apps” section, but this is steadily being populated with Progressive Web Apps or website links that run through your browser. (This is also due to the fact that Chrome OS is becoming increasingly compatible with Android apps via the Play Store.)

But for regular PC users, Chrome apps have been blended into extensions these days. If you’re looking for an ad-blocker, Web Clipper, or any number of things for Chrome, whether you search for “Chrome app” or “Chrome extension,” you’ll end up with an extension.
Which leads to the next question: what is a Chrome Extension?

**Chrome Extensions**

This one’s much easier to explain. Chrome extensions are add-ons to Chrome designed to improve your experience in various ways. This can range from data savers, to ad blockers, to dictionaries that let you double-click on a word in Chrome and instantly get its meaning. You can find extensions in the [Chrome Web Store](https://chrome.google.com/webstore), and when you install one, it will appear as a little icon in the top-right corner of your Chrome browser.

You can resize the extensions area by hovering over the space just to the right of the address bar, then left-clicking and dragging it left and right. Extensions that don’t fit here will sit in the Chrome menu which you open by clicking the three-dotted menu icon at the top-right corner of Chrome.

**Chrome Plugins**

[continued page 3]
Plugins are best described as bundles of code that “plug in to” Chrome, allowing web developers to embed certain features, animations, videos and so on to their websites. Until version 57 of Chrome, you could go to chrome://plugins in the address bar and see a list of all the plugins for Chrome, which included things like Adobe Flash Player, Chrome PDF Viewer and Java.

The reason this page no longer exists is partly because Chrome doesn’t support NPAPI plugins anymore due to security concerns – some plugins no longer work and others have been integrated into Chrome in various ways. Flash Player, for example, is now controlled through Chrome’s settings, while Java-based applets no longer work in the browser. Features like the PDF Viewer have been directly integrated into the browser.

So, a bit like with Apps, the idea of Chrome plugins is being phased out or being integrated into the body of the browser.

How to keep your smart TV safe from hackers

The FBI said TVs and technology are a big part of our lives and they are not going away any time soon. Here are some suggestions it gave to protect your family:

- Know exactly what features your TV has and how to control those features. Do a basic internet search with your model number and the words “microphone,” “camera” and “privacy.”
- Don’t depend on the default security settings. Change passwords if you can — and know how to turn off the microphones, cameras and collection of personal information if possible. If you can’t turn them off, consider whether you are willing to take the risk of buying that model or using that service.
- If you can’t turn off a camera but want to, a simple piece of black tape over the camera lens is a basic option.
- Check the manufacturer’s ability to update your device with security patches. Can they do this? Have they done it in the past?
- Check the privacy policy for the TV manufacturer and the streaming services you use. Confirm what data they collect, how they store that data and what they do with it.

A Year’s Resolution

Useful Maintenance Tips to Keep Your Windows Computer in Shape

You use your computer every day, and chances are that you don’t bother with computer maintenance because you just don’t have the time for it. Keeping up with maintenance on your computer is critical to keeping it up and running.
Since you’re going to have to deal with maintenance sooner or later, it might as well be sooner. That way you’ll prevent any small problem from getting any bigger, and the following tips can help.

1. **Keep Your Computer Dust Free**
   If you let your computer collect too much dust, the dust will work as an insulator, turning up your computer’s heat.
   The most common cleaning tool is a can of compressed air. This will do a great job of eliminating the dust from those hard to reach areas, but make sure to keep the can as vertical as possible.
   If you can crack open your computer, you can do an even better job of cleaning it and wiping away that dust. To wipe down every inch of your computer (after opening it up), you’ll need tools such as microfiber cloths, distilled water, and Q-tips.

2. **Use a Fan to Cool Your Laptop**
   If you keep your laptop on a table without using a fan as a base, you’re not letting the heat escape. The heat needs to have some space to prevent it from building up. You can find a large variety of fans on Amazon at a very decent price.

3. **Always Update Windows**
   Every once in a while your Windows computer will let you know that you have pending updates. It’s true that the updates can come at a bad time, and you may need to postpone it, but make sure you don’t wait too long.
   Those updates help keep your computer in the best possible shape. Updates also have security patches that help keep your computer safe.
   To check if you have an update pending, type “Update” in the search box located at the bottom-left of the display. Choose Windows update, and Windows will let you know if you’re up to date.

4. **Erase Your Computer’s Temporary Files**
   Also, don’t forget to clear the temporary files on your computer since they can slow it down over time. You can do this by opening the run box and typing the `%temp%` command.
   When the Temp folder opens, choose the files you want to delete. After you’ve selected the files, delete them by pressing the Delete key on the keyboard or from the Home menu.

5. **Uninstall Unnecessary Software**
   To keep your computer running as smooth as possible. Get rid of useless software, it can also slow down your computer.
   You can easily uninstall any software by clicking on the Start menu and right-clicking on the software you want to get rid of. The Programs and Characteristics window will appear. Look for the software, right-click on it, then click “Uninstall.” You will only be able to uninstall it if you have administrative privileges.

6. **Remove Unnecessary Startup Programs**
   Having too many auto-startup programs can increase your computer’s startup time. Take a look and see if there are any programs at startup that you can manually start so that they only launch when you need them.

7. **Run Virus and Malware Scans Regularly**
   Make sure you also have a good antivirus and Malware software that will periodically scan your computer for viruses and other dangers. You of course know that not getting rid of these risks can hurt your computer and even expose your personal information.
Combinations On Your Keyboard

Here are 10 secret keyboard combinations that would make your life easier:

10. Create a New Folder
You can always do it the good, old-fashioned way by right-clicking your mouse and going down to “Create a Folder” option. But you can do the same with literally one command.

Just press “Ctrl” plus “Shift” plus “N” while on your desktop or in an explorer window.

9. Emoji Keyboard
If you can’t tolerate sending a message without an emoji, then try this trick whenever you’re on a computer. Just press the “Windows key” plus “Period (.)” and enjoy the emoji keyboard on your Windows device. *Keep in mind that this only works on Windows 10.*

8. Restore Words and Sentences
If you accidentally delete a letter from your word document, it’s not that bad. But have you ever accidentally deleted a piece of text, be it a word or sentence? Well, instead of retyping it, you can bring the word or sentence back if you press Alt + Backspace.

This will bring back the last deleted sentence or word.

7. Reopen Last Closed Tab
Ave you ever accidentally closed a tab on your browser? Instead of spending time searching for that very same page, simply use this keyboard combination; Ctrl + Shift + T.

This is super handy if you accidentally close a tab you didn’t intend to close. If you were doing work on that tab, it will go as far as save all that work. That’s because this command brings the cached version of the page.

6. Log Off
We all know the stereotypical way of logging off the computer. It’s time-consuming and involves a lot of clicking and mouse movements. This keyboard combination is great for privacy as it logs you off instantly.

If you don’t want someone to see what you’re working on, you can simply log yourself right off. All you have to do is press Windows Key + L.

5. Private Browsing
For private browsing, you can easily access this by clicking on the new private browsing window. This quick and easy combination keyboard opens a private browsing window instantly. Simply hold down Ctrl + Shift + N.

Doing this instantly opens up a private browsing window that can be great if you don’t want people to know what you are up to. Private browsing blocks things like history and cache. This means there’s no way to trace back to what you were doing.

4. Force Close
Have you ever tried to close a program that was glitching out but wouldn’t close? Maybe it said the program wasn’t responding and couldn’t close. Using this keyboard combination will foreclose any program. All you have to do is have the program open and then press Alt + F4.

If you have many windows of the same program, it will close the window you are on. This is also handy if someone walks by your computer and you don’t want them to see what you have been doing.

3. See All Windows
If you’re multitasking, you likely have at least three to four windows opened on your computer. Did you know the average person at work actually has over six things open on their computer at any given time? Sometimes it gets overwhelming and you don’t know what you have open and what you have closed. If you hold down Ctrl + Alt + Tab, you can see every window you have opened right now. And you can even navigate between them. If you require multiple windows open at the same time, this is for you.

2. Add a New Virtual Desktop
If you usually keep a lot of tabs at once or prefer to use your PC for different types of tasks, virtual desktops will be a lifesaver when it comes to staying uncluttered and organised. To open a new virtual desktop when you need it, press Windows Key + Ctrl + D.

If you need to move back and forth within your desktops, press Windows Key + Ctrl + right/left. To close the current desktop for good, press Windows Key + Ctrl + F4. However, you’ll only have access to all these conveniences if you use Windows 10.

1. Rename
You rename documents and folders by going to the folder/document properties and changing the name. Did you know by pressing just one button you can rename any file or folder you want? All you have to do is click once on the folder then press the F2 key and it will allow you to change the name.

This works for any file or folder and one can even change the file type. For example, if you want to change a JPEG to a PNG image.
What Does “Fulfilled by Amazon” Mean

Over 80% of the products sold through Amazon are bought not from Amazon but from an Amazon Marketplace seller who is paying Amazon to list their product.

Fulfilled by Amazon

Most people—including me—don’t even notice when they’re not buying directly from Amazon. The packages arrive at your door just the same.

How to Spot an Amazon Marketplace Seller

Over on the right-hand side, under the “In Stock” section, Amazon lists the seller and shipper.

Marketplace sellers who don’t use Fulfilled by Amazon are even easier to spot. The buying process is different.
The Problem With Fulfilled by Amazon and the Amazon Marketplace

Amazon can’t—and doesn’t—thoroughly review and police every seller or item. This has led to a large number of scammers.

There are dozens of additional strategies bad sellers use, from hijacking legitimate listings with knockoff products to selling items they don’t even have and just running off with the money. Amazon doesn’t do anything until people start to complain and by then it’s often too late. While Amazon will always refund people with their A-to-Z guarantee, you still have to deal with the hassle of being scammed.

How to Avoid Scammers on Amazon

Amazon is trying to address the problem, but it’s still a big issue. There’s always a risk that you’re being scammed when you buy from an Amazon Marketplace seller.

We’re not advising you to run out and cancel your Prime membership. The vast majority of the time you’ll be fine especially if you exercise a little care. If what you’re buying is Fulfilled by Amazon or otherwise from a third-party seller, check out the listing and reviews. If everything looks good, go right ahead, but if you see any red flags, maybe buy from somewhere else.

Amazon: Apps to Show Deals and Discounts to Save Money

The Forklift (Web): Open Box Deals From Amazon

Have you ever tried to browse Amazon Warehouse Deals to find a discounted item? It’s a maze, and there seems to be a group of elite players who grab great deals before you can ever get to them. Well, The Forklift is here to level the playing field.

Amazon Warehouse Deals isn’t a secret. It’s one of the best money-saving ways to shop on Amazon. It’s where all the pre-owned or open-box items go, after a second check to see their condition. But The Forklift is the only way to see items as they are added.

The site has a real-time feed of new items on Amazon Warehouse Deals, which you can even pause if it gets too much for you. You can add or exclude keywords, set filters to hide certain items, and most importantly, select item condition. Use this app and you’re going to be one of those elite shoppers snagging deals that make your friends jealous.

ReviewMeta (Web, Chrome, Firefox): Find Real Reviews, Avoid Fakes

Next to every product is a prominent rating and plenty of user reviews. But in case you didn’t know, several of these are fake. Companies create fake user profiles to talk up what they’re selling. ReviewMeta sorts the real from the fake so you make informed decisions.
Copy-paste the URL of any item into ReviewMeta to generate a full analysis of its reviews on Amazon. The report tells you where it passed or failed, and sorts the most trusted and least trusted reviews. You also get a new adjusted rating for the item, based only on the real reviewers.

ReviewMeta is also available as a browser extension for Chrome and Firefox, but don’t install it. The extension only redirects you to the site. You are better off grabbing the bookmarklet instead. There are other apps like Fakespot to find trustworthy reviews, so you might want to check those out too.

**So Cool** (Web): The Missing Advanced Search for Amazon

We know and appreciate Amazon’s Advanced Search. But boy, it could be so much better. It almost seems like Amazon doesn’t want to let the user have more control to find exactly what he or she wants. So Cool is that missing “Advanced Search” for Amazon.

**Hackers have a shocking new tactic to scam you with fake products**

If a hacker knows your interests and demographic information, it becomes much easier to target you with scams.

**Am I at risk of being targeted?**

Unlike some data leaks, the stolen information functions more like a mailing list than a database of compromised accounts. The goal of these scammers is to bombard the victims with spam in hopes that someone will feel pressured into taking the bait on a batch of diet pills or pieces of clothing.

These items are counterfeits and quack health solutions, which proves how malicious the people behind the attacks are.

Rather than worry about your account being compromised, keep an eye out for aggressive email campaigns and spam. Never open any emails that come from unknown senders and never open any attachments on any email you’re not 100% sure about. And of course you know the drill on links, hover your mouse over the link, careful not to click on it, the true site will appear at the bottom of your window.

**7 Android Apps that Can Save Your Life in an Emergency**

First Aid (American Red Cross)
From the American Red Cross comes an intuitive app packed with useful information for virtually any scenario. Whether you want to brush up on your first aid skills or have zero prior knowledge, this app has you covered. There are basic first aid lessons covering a variety of topics, complete with videos and diagrams. For emergency situations the app provides easy-to-follow step-by-step instructions to administering first aid. In addition, it includes an integrated 911 button, allowing you to call emergency services from within the app.

The app also includes safety tips on a wide variety of situations, from severe winter weather to hurricanes. There are also interactive quizzes that help keep your lifesaving knowledge up to date. The app is ad-free, available in Spanish and does not require an Internet connection.

**Pet First Aid (American Red Cross)**

In a disaster situation it can be easy to overlook the well-being of our four-legged friends. The Pet First Aid app from the American Red Cross is very similar to its human counterpart. There are easy-to-understand instructions to help guide you through veterinary emergencies, including size-specific CPR techniques. The app also features advice and tips on a range of topics including stress management and more. In addition, you can store your veterinarian’s contact number and provide locations to the nearest vet hospital.

**FEMA**

The official app of the Federal Emergency Management Agency is loaded with useful information. The app includes a database of tips for what to do before, during and after over twenty types of disasters. Furthermore, it can point you in the direction of disaster recovery centers and open shelters.
In addition to potentially life-saving information, the FEMA app also features a number of handy tools. You can create a list of items in your emergency kit, as well as a list of family meeting places. Finally, the app includes a feature called “Disaster Reporter.” This allows you to share your disaster photos with emergency personnel to assist in rescue efforts.

**Disaster Alert**

Do you live in an area prone to the wrath of Mother Nature? Whether it is severe weather or man-made emergencies, give Disaster Alert a look. The app features an interactive map that lists active hazards around the globe. The app compiles information on a wide variety of incidents from authoritative sources worldwide. These incidents are “designated hazardous to people, property or assets.” Disaster Alert issues automatic updates every five minutes on everything from wildfires to tsunamis to volcanoes. In addition, users can view additional information that can be shared with others directly from the app.

**Medical ID**

Susan Well
Mar 15, 1986 (30 years)
Organ donor

- **Height:** 175 cm
- **Weight:** 59 kg
- **Blood Type:** O+
Medical ID allows users to create a customized medical profile that is displayed on your device’s lock screen. In the event of an emergency, first responders can quickly access vital, life-saving information. You can include information like your blood type, any allergies you may have, emergency contacts, medications you take and more. If you are incapacitated during an emergency situation, Medical ID can provide medical staff with the essential information they need to take action.

bSafe
Covered by the likes of Forbes, CNN, BBC, Fox News and more, bSafe has received numerous accolades. The app features an alarm that is activated by touch or voice. Once the alarm is activated, the app automatically sends your GPS location as well as audio and video to chosen contacts.

Real-time location info is the main draw, but the bSafe app was designed with everyday safety in mind. The Follow Me feature allows nominated contacts to follow you via GPS tracking. When you have arrived at your destination safely, those contacts receive a message. There is also a timed alert that automatically notifies your nominated contacts if you have not checked in by a certain time. Finally, there is a fake call feature which sends an automated call to your device, getting you out of potentially dangerous situations.

American Red Cross Wildfires, Tornado, Hurricane & Earthquake

The American Red Cross has four apps specifically tailored to some of the most common natural disasters affecting Americans today:
- wildfires
- tornadoes
- hurricanes
- earthquakes

The app supplies users with up-to-date notifications concerning the developments of these emergencies. In addition, the apps are chock-full of advice and tips that can help you navigate these disasters safely. Like the other American Red Cross apps, these are available in Spanish.
How to fix the 7 most irritating Windows 10 features

1. Stop inconvenient software update reboots

It’s probably happened to you at least once, twice, or 10 times by now. There you are right in the middle of streaming your favorite series and it happens. Windows begins to automatically install a new update and suggests that you reboot your computer right then and there. How convenient.

Thankfully, there are a couple of ways for you to keep Windows 10 from updating on your precious time. First, if you go to your settings menu you can set time parameters with the ‘active hours’ feature for updates as they come in. That way your computer will not be able to automatically update itself during those busy hours.

Or, you can always pause them altogether. Yes, you can put a halt on these updates for up to 35 days if you so desire. Simply go to your settings menu, choose the Windows updates field and go to the advanced options. From there, you can toggle the Pause Updates option and switch it to On.

2. Cortana is compromising your security

The problem is Cortana is always listening and that can spell disaster if you’re not careful. Unfortunately, a flaw has been found which can allow hackers to break into a Windows 10 computer using Cortana’s voice commands, even while it’s locked. This means that anyone can issue voice commands to Cortana and force it into downloading malicious malware.

You can stop Cortana from putting your personal data at risk by simply removing Cortana from your lock screen and teach it to only respond to your voice alone.

- Go to the talk to Cortana option found in your settings menu.
- Under Hey Cortana, turn the Let Cortana respond to Hey Cortana switch to on.
- Next, click the link labeled, learn how I say Hey Cortana. This will allow you to go through the voice recognition training.
- From here, click on the Cortana start button and repeat the six provided phrases. This will get Cortana familiar with your voice.
- After the training is complete you can now go back to talk to Cortana in the settings menu and enable the try to respond only to me option.

3. Change search from Bing to Google (or your preferred search engine)

Whether you prefer Bing, Google or Yahoo, Windows 10 has no right to choose your default search engine for you. Windows 10 has Bing set as the default search engine for Microsoft Edge, but that may not sit well with a majority of users who much rather have Google instead.

So, here’s how you can change things up a bit.

- Simply start by searching Google.com.
- Click on the three dots at the top right corner to go to settings.
- Scroll to the bottom and choose View Advanced Settings.
- Go down the list until you find the search in the address bar option. Click it and select Add New.
- Click on Google and chose, Add as Default. Done.
4. Annoying login

If you prefer to keep your computer secure, but hate having to constantly type in a super long, secure password you have the ability to reset it to a simple PIN. Your PIN is only four digits long and doesn’t require any complicated parameters such as special characters, or mixed case letters, just numerals. It may not sound too secure, but it certainly makes life easier.

Setting up your PIN is pretty simple. Go to Settings > Accounts > Sign in options. From there, click the Add button under PIN. Enter in any PIN of your choice and restart to give it a try.

5. The start menu is too small or too big

The start menu acts as the central hub for everything you do on Windows 10. You start with it and end with it. Because it’s default look, users have often complained about the default size of the start menu being either too big or too small, but don’t realize how easily they customize it to their liking.

You can simply drag it and it’ll stay the size you set it as. How? Easy.

Click on the Start menu and move your cursor to the top edge of it until it shows as a two-sided arrow. Click, hold and drag to resize the menu to your preferred size and let go. Pretty easy, right?

6. Windows 10 won’t let you watch DVDs

By now you’ve probably noticed that Windows 10 won’t play DVDs and Windows media player has been removed as well. While Microsoft offers an official DVD playback option, the reviews don’t seem favorable since it costs $15 and seems to have persistent problems.

Fortunately, there’s a better option available that can have you watching DVDs easily and free of charge. Just simply download the VLC video player. Be sure to download the desktop app instead of the Windows Store version, which won’t support DVDs or Blu-Ray discs.

7. Windows won’t stay quiet

Windows has developed a habit of announcing everything you touch with an actual voice. It sounds like the plot of a weird horror movie. Windows will record and recite any text that you type into the Cortana Search Box. This can seem funny at first, but after a while, it can get pretty annoying.

People have complained about this over time but never thought there was anything they could do about it. Well, it turns out that there is. It’s possible that you may have inadvertently turned on the Narrator feature, which is used by visually impaired users to better navigate the system without having to type, just talk.

To turn the Narrator off, you can either repeat the keyboard combination, CTRL + Windows Key + Enter or go to the Narrator settings app and tap exit. To keep the Narrator from accidentally coming on again, go back to the settings > General and uncheck the Enable the shortcut to launch Narrator box. Problem solved.
On Tuesday, December 10th, forty-three members and guests attended the SCORCC annual Christmas party held at Andre's Banquet Center on Telegraph Road.

As members arrived, an appetizer of toasted ravioli was served. At about 11:30, Norm Miller, our M.C. greeted everyone and gave the invocation before we began the buffet line. We were served a delicious lunch of salad, chicken, beef, fish, pasta, green beans and dessert.

Following dessert and coffee, we were entertained by The Queens of Swing, The All-Girl Band consisting of a drummer, pianist and trumpet player. They played a variety of Christmas music and a few of their specialty band pieces of 1940s swing hits.

At the conclusion of their performance, our M.C., Norm Miller, introduced Patty Gramke of CORP (County Older Residents Program). Patty explained the social services CORP provides to St. Louis County seniors who wish to remain independent in their homes. Norm then drew numbered tickets for the attendance prizes which consisted of twenty $10 QT gas gift cards, six moderate size poinsettias and one large poinsettia plant.

Many members then lingered and socialized before heading home. We thank everyone who contributed their time and effort in coordinating this enjoyable party.

Respectfully submitted
Deanna Rickert, Genera Meeting Secretary
Our “Genealogy” SIG:
Genealogy Multi-Topic SIG will be held on Friday, January 10th, 10:00 am to noon, at the County Government Center meeting room. My topic will be “Tips for Searching for Your Elusive Female Ancestors”

Future General Meeting Dates: Feb 11th, Mar 3rd, Apr 14th, May 19th and June 9th
Want to join? It's easy! Mail a check for $15 per person, or $22 per household, payable to SCORCC with a completed membership information form to Jim Bartlett, 4275 Rock Island Road, Arnold, MO 63010. (The library does not allow cash exchange in the library.) You'll receive a name badge and Bits Bytes & Bugs, the monthly newsletter. For more information see the SCORCC Website at http://www.scorcc.org

“We just need your email address so we can email you all day, every day, for the rest of your life.”
